

If elected to the ISOP board, I would bring to the position 20+ years of experience of applying pharmacometric approaches to better informing drug development decision-making. In addition, I have worked at both consultancy (Certara and Quantitative Solutions) and biopharmaceutical companies (UCB and GSK). So, I am well-acquainted with the challenges faced by pharmacometricians in either of these environments.

In addition to considerable professional experience, I have a track record of serving both ISOP and the pharmacometric community at large. Some highlights of my

service include:

- Planned and hosted regional ISOP events in both the NJ/PA area and in Raleigh-Durham, North Carolina
- Served as ACOP social chair for the past three years running
- Conceived and co-organized the MIDD Gran Prix, a pharmacometric skills competition which was a highlight at the 2018 ASCPT meeting
- Was a key contributor to ISOP's response to the 2019 FDA draft guidance on population pharmacokinetics

I am a passionate advocate for the field of pharmacometrics, and its potential to benefit patients. However, I also believe that our impact is often diminished by our inability to communicate and collaborate effectively with those outside our field. As I see it, wherever he/she may sit in an organization, every pharmacometrician is a consultant. This is because we are generally decision-influencers rather than the decision-maker. However, by and large, pharmacometricians are trained to be analysts. If elected to the ISOP board, I would make it my personal mission to fulfill this unmet need by promoting programs helping pharmacometricians be more effective influencers and communicators.
